

## Acknowledgments

It has been a privilege and pleasure to develop this book, presenting the life story of a remarkable individual. His Excellency Abdulaziz Al-Zamil has witnessed and played key roles in the dramatic modernization of Saudi Arabia. He has been a central actor in the rapid development of its dynamic petrochemical industry, as well as in the electrification of his country. Our work would not have been possible without the full support of its central figure. Abdulaziz Al-Zamil sat with us for many hours of oral history, offered generous hospitality, introduced us to his family, and regaled us with intriguing details of his life, of the creation of the Saudi Basic Industries Corporation (SABIC), and of his determination to foster a private petrochemical sector.

We also wish to thank numerous other individuals central to the rise of the petrochemical industry of Saudi Arabia. William Carpenter, Roy Gerard, Abdulaziz Al-Jarbou, William Joyce, Mohamed Al-Mady, Abdullah Nojaidi, Ahmad Al-Ohali, Moayyed Al-Qurtas, Abdulaziz Al-Qwaiz, Fahad Al-Rajhi, Ibrahim Ibn Salamah, Ronald Swofford, Lawrence Wheeler, Abdulrahman Al-Zamil, and Osama Al-Zamil were of especial help.

We thank Nabil Faour for his indefatigable aid and particularly for his patience in advising us on numerous details as our research progressed. Rachel Jones, Della Keyser, and Marthenia Perrin of Science History Consultants offered invaluable assistance.. Finally we thank SABIC and Chemical History Foundation and Arabian Knight Magazine for providing many of the images that appear in this book.

To our own enlightenment and pleasure, we learned much about the too-often neglected “good news and civilized life” that characterizes modern Saudi Arabia. We hope this study will provide the reader with an understanding not only of the extraordinary life of His Excellency Abdulaziz Al-Zamil but also of the fascinating journey of Saudi Arabia into modernity.

*Arnold Thackray, Chancellor, Chemical Heritage Foundation*
