

RECOMMENDATIONS

- Studying other genes responsible for HCV related MC and another site of polymorphism in BAFF promoter gene rather than-871C/T.
- Conducting further studies on a larger population regarding the protective role of BAFF polymorphism.
- Conducting the study using real time PCR technique, this could give more accurate and reliable results.
- Conducting further studies on the safety and benefit of including anti BAFF antibody supplements in treatment protocols of HCV related MC.

المخلص العربي

الكريوجلوبولينيميا هي بلازما ايمونوجلوبولين التي تترسب عند انخفاض درجة الحرارة. النوع الأول للكريوجلوبولين هو ايمونوجلوبولين أحادي النوع وكثيراً ما يأتي مصاحب لأمراض الدم. أما النوع الثاني والثالث فهما كريوجلوبولين مختلط يتكون من ايمونوجلوبولين ميم أحادي ومتعدد النوع بالترتيب.

تتميز الكريوجلوبولينيميا المختلطة بثلاث صفات أساسية البقع والإجهاد والتهاب المفاصل. وكثيراً ما تتأثر العديد من الأعضاء كالكلي والجهاز العصبي بالكريوجلوبولين.

ومن الممكن أيضاً أن تصاحب الكريوجلوبولينيميا المختلطة العدوي والأمراض العضوية الشاملة حتى أنه منذ عام ١٩٩٠ العديد من الدراسات أثبتت أن الإلتهاب الكبدي الوبائي سي قد يكون عامل أساسي لحدوث هذا المرض.

إن العلاقة بين الكريوجلوبولينيميا المختلطة وعدوي الإلتهاب الكبدي الوبائي سي أوضحت نظرات جديدة حول تفسير العلاقة بين العدوي الفيروسية وظاهرة المناعة الذاتية والإضطرابات الليمفاوية النشطة الانقسام.

في الحقيقة أن الفيروس يحث الخلايا بي الليمفاوية المتعددة علي الإنقسام والزيادة بصفة مزمنة التي تنتج عنها بعد ذلك الأحادية النوع.

إن المرضي اللذين لديهم أعراض الكريوجلوبولينيميا المتعددة المصاحبة للإلتهاب الكبدي الوبائي سي يكون الأساس في خطة علاجهم هو القضاء علي الفيروس نهائياً. وقد يكون العلاج بهذه الطريقة هو السبيل لتراجع التطور المرض للإضطرابات الليمفاوية النشطة الانقسام.

وفي دراساتنا المقدمة نكون قد أوضحنا أن التعدد الشكلي الجيني لباف بروموتر له علاقة قوية بالكريوجلوبولينيميا المتعدده المصاحبه للإلتهاب الكبدي الوبائي سي وبالتالي توضع العلاقة بين الأساس الجيني في مرضي الالتهاب الكبدي الوبائي سي والإضطرابات الليمفاوية النشطة الانقسام.

وبهذه المعلومات التي نتجت من خلال الأبحاث كان لها الأثر الكبير علي خطط العلاج من خلال إستخدام الأجسام المضادة لباف في العلاج وتستخدم هذه الأدوية بالفعل في علاج مرض الزئبة الحمراء وبمزيد من النتائج المشجعة قد يستخدم هذا الأسلوب من العلاج في علاج الكريو جلوبيولينيا المتعددة المصاحبة للإلتهاب الكبدي الوبائي سي بعد إجراء التجارب الملائمة.

ومن المعوقات التي تقابلنا في الأبحاث الجينية هو كمية العينة خصوصاً أثناء التعامل مع مرض نادر مثل الكريوجلوبولينما المتعددة.

التعدد الشكلي الجيني لباف بروموتر لحالات الكريوجلوبيلنيميا
المصاحبة للإلتهاب الكبدي الوبائي سي
