

LIST OF TABLES

Table		Page
(I)	Mean ureteral tunnel length and diameter in normal children	12
(II)	Size specific laparoscopic instruments kits	15
(III)	The Faces Legs Activity Cry Consolability (FLACC) Scale	25
(IV)	Clavien et al classification of surgical complications	26
(V)	Distribution of studied patients according to demographic data	30
(VI)	Distribution of studied patients according to presence of fever and painful micturition	30
(VII)	Distribution of studied patients according to type of mega ureter, side and grade of refluxing ureters.	31
(VIII)	Distribution of studied patients according to number of trocars used, additional port insertion and need for tailoring	32
(IX)	Distribution of studied patients according to perioperative outcomes	33
(X)	Distribution of studied patients according to intra-operative complications	34
(XI)	Distribution of studied patients according to post-operative complications	35
(XII)	Distribution of studied patients according to functional outcome	39
(XIII)	Distribution of studied patients according to Symptomatic outcome	39

LIST OF FIGURES

Figure		Page
(1)	Course of the ureter	2
(2)	Pelvic relations of the ureter in females	3
(3)	Pelvic relations of the ureter in males. A) Oblique view. B) Coronal view. C) Lateral view.	4
(4)	Normal ureterovesical junction and trigone.	5
(5)	Pelvic side wall triangle in a female pelvis.	6
(6)	Pelvic side wall triangle in a male	7
(7)	Functional anatomy of vesico-ureteral junction.	8
(8)	Obstructive megaureter with distal aperistaltic segment.	10
(9)	Grading of vesicoureteral reflux "VUR"	12
(10)	Patient in Trendelenburg position.	19
(11)	Ureteral dissection. A) Deperitonization of the ureter. B) Dissection of ureter from behind the vas deference. C) Making an opening through the broad ligament. D) Dissection of the ureter through the broad ligament.	21
(12)	A) Hitch stitch through anterior abdominal wall. B) Posterior bladder wall exposed.	22
(13)	A) Creation of bladder seromuscular trough using electrocautery. B) Seromuscular tunnel opened with intact mucosa.	22
(14)	A) Dilated ureter before tailoring. B) Ureter after intracorporeal tailoring.	23
(15)	DJ stent inserted into ureter through bladder rent before its closure.	23
(16)	A) Closure of the bladder tunnel around the ureter. B) Ureter after complete reimplantation	24
(17)	Visual analogue scale (VAS)	26
(18)	Pyogenic granuloma at trocar site.	35
(19)	Patient with VUR. A) Preoperative VCUG with left grade III VUR. B) VCUG 3 months after surgery with complete resolution of VUR.	37
(20)	Patient with obstructive megaureter. A) Preoperative left descending nephrostogram showing left obstructive megaureter. B) VCUG 3 months after surgery. C) VCUG 6 months after surgery.	37
(21)	Patient with VUR. A) Preoperative VCUG with right grade III VUR. B) VCUG 3 months after surgery showing downgrading of VUR. C) VCUG 6 months after surgery showing complete resolution of VUR.	38
(22)	Patient with VUR. A) Preoperative VCUG with left VUR. B) VCUG 3 months after surgery showing resolution of left VUR and de novo right VUR. C) VCUG 6 months after surgery showing bilateral complete resolution.	38

LIST OF ABBREVIATIONS

ASA	American Society of Anesthesiologists
CAP	Continuous Antibiotic Prophylaxis
CBC	Complete Blood Count
CO₂	Carbon Dioxide
DMSA	Di Mercapto Succinic Acid
DRF	Differential Renal Function
DTPA	Diethylene Triamine Penta-acetic Acid
ER	Emergency Room
FLACC	Faces Legs Activity Cry Consolability scale
IAP	Intra-Abdominal Pressure
ICU	Intensive Care Unit
LESS	Laparo-Endoscopic Single Site Surgery
LUTS	Lower Urinary Tract Symptoms
MRU	Magnetic Resonance Urography
PVR	Post Voiding Residual
UB	Urinary Bladder
UGS	Uro-Genital Sinus
US	Ultrasonography
UTIs	Urinary Tract Infections
UVJ	Uretero-Vesical Junction
VAS	Visual Analog Scale
VCUG	Voiding Cysto-Urethro-Gram
VUR	Vesico-Ureteral Reflux
