

Acknowledgement

First thanks to Allah, the merciful, the beneficent for helping me during this work,

*I would like to express my indebtedness and deepest gratitude to **Professor Dr. Ragaa Talaat Darwish**, Professor and head of Forensic Medicine and Clinical Toxicology, Faculty of Medicine, Alexandria University; she was encouraging all the time. It is honorable to be supervised by her.*

*I will never forget how co-operative was **Dr. Haidy Mostafa Abd El-Salam Megahed**, Assistant Professor of Forensic Medicine and Clinical Toxicology, Faculty of Medicine, Alexandria University; thanks to her valuable advice, guidance and constructive criticism, many thanks for the invaluable assistance and efforts, she devoted in the supervision of this study.*

*I am greatly indebted to **Dr. Mona Wagdy Ayad**, Assistant Professor of Clinical and Chemical Pathology, Faculty of Medicine, Alexandria University for her support to achieve and elaborate output.*

Many thanks for the patients who participated in this study.

PROTOCOL	
ARABIC SUMMARY	

List of Tables

No.	Tables	Page
I.	Severity grading of OP poisoning based on blood cholinesterase inhibition and clinical features	9
II.	Signs and Symptoms of Acute Poisoning with Anticholinesterase Compounds	10
III.	Drawbacks of cholinesterase activity assays	12
IV.	Factors affecting outcome in organophosphorus pesticide self-poisoning	14
V.	Reactions of acetylcholinesterase after inhibition with organophosphorus	14
VI.	CK values usually found in some muscular pathology.	19
VII.	The Peradeniya organophosphorus poisoning scale	24
VIII.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the age in relation to gender (n=60).	28
IX.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to marital status in relation to gender (n= 60).	29
X.	Distribution of patients with cholinesterase inhibitors insecticides toxicity by the level of education in relation to gender (n= 60).	30
XI.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the occupation in relation to gender (n=60).	31
XII.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to residency in relation to gender (n= 60).	32
XIII.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the habits of medical importance (Smoking) in relation to gender (n= 60).	33
XIV.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the route of poisoning in relation to gender (n= 60).	34
XV.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the circumstances of poisoning in relation to gender (n= 60).	35
XVI.	Vital signs in patients with cholinesterase inhibitors insecticides toxicity (n= 60).	36
XVII.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the pupil size (n=60).	37
XVIII.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the presenting symptoms (n=60).	38
XIX.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the POP score in relation to gender (n=60).	39
XX.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the mean laboratory investigations (n= 60).	41
XXI.	Distribution of patients with cholinesterase inhibitors insecticides toxicity according to the mean total amount of atropine used in relation to the severity (n=60).	42

XXII.	Comparison between the mean initial and final levels of the different laboratory investigations in patients with cholinesterase inhibitors insecticides toxicity in relation to severity by POP Score (n= 60).	44
XXIII.	Correlation between the initial PchE levels (U/L) and POP Score categorization among the studied patients (n=60).	45
XXIV.	Correlation between the initial CPK levels (U/L) and POP Score categorization among the studied patients (n=60).	46
XXV.	Correlation between the initial pH levels and the POP score categorization among the studied patients (n= 60).	47
XXVI.	Correlation between the initial PCO ₂ levels (mmHg) and the POP score categorization among the studied patients (n= 60).	48
XXVII.	Correlation between the initial HCO ₃ levels (mEq/L) and the POP score categorization among the studied patients (n= 60).	49
XXVIII.	Correlation between the initial PchE levels (U/L) and PCO ₂ (mmHg) among the studied patients (n= 60).	50
XXIX.	Correlation between the initial PchE levels (U/L) and the initial HCO ₃ levels (mEq/L) among the studied patients (n= 60).	51
XXX.	Correlation between the initial CPK levels (U/L) and PchE (U/L) and pH among the studied patients (n=60).	52

LIST ABBREVIATIONS

ACh	:	Acetylcholine
AChE	:	Acetylcholinesterase
ADP	:	Adenosine Diphosphate
ALT	:	Alanin Aminotransferase
ANS	:	Autonomic Nervous System
AP	:	Action Potentials
AST	:	Aspartate Aminotransferase
ATP	:	Adenosine Tri-Phosphate
AV	:	Atrioventricular
BChE/BuChE	:	Butyrylcholinesterase
ChEIs; CEIs	:	Cholinesterase Inhibitors
CK	:	Creatine Kinase
CNS	:	Central Nervous System
CPK	:	Creatine Phosphokinase
CPO	:	Chlorpyrifos Oxon
DAG	:	Diacylglycerol
DNA	:	Deoxyribonucleic Acid
EPA	:	Environmental Protection Agency
EPSP	:	Excitatory Postsynaptic Potentials
ESI	:	Electrospray Ionization
GFAP	:	Glial Fibrillary Acidic Protein
IMS	:	The Intermediate Syndrome
IP3	:	Inositol Tri-Phosphate
MALDI	:	Matrix-Assisted Laser Desorption/Ionization
MALDI-TOF MS	:	Matrix-Assisted Laser Desorption/Ionization Time Of Flight Mass Spectrometry
mRNA	:	Messenger RNA
MS	:	Mass Spectrometry
NTE	:	Neuropathy Target Esterase
OP	:	Organophosphate
OR	:	Odds Ratio
PCr	:	Phosphocreatine
PLC β	:	Phospholipase C β
PNS	:	Peripheral Nervous System
PON1	:	Paraoxonase
POP	:	Peradeniya Organophosphorus Poisoning scale
RNA	:	Ribonucleic Acid
THA	:	Tetrahydroaminoacridine
TOCP	:	Tri-O-Cresyl Phosphate
WHO	:	World Health Organization
