

## LIST OF FIGURES

Figure No.		Page No.
1.	Structure of double-porosity medium .....	7
2.	Conceptual physical non-equilibrium models for water flow and solute transport .....	10
3.	Conceptual physical non-equilibrium models for water flow and solute transport .....	10
4.	Conceptual chemical non-equilibrium models for reactive solute transport .....	15
5.	Layout of column experiment .....	23
6.	Mariotte's bottle .....	24
7.	Soil water retention curve of sandy loam soil (van Genuchten model) .....	32
8.	Soil water retention curve of sandy loam soil (Durner's multimodal pore system) .....	32
9.	Soil water retention curve of sandy soil (van Genuchten model).....	32
10.	Soil water retention curve of sandy soil (Durner's multimodal pore system).....	33
11.	Soil water retention curve of sandy clay loam soil (Durner's multimodal pore system).....	33
12.	Soil water retention curve of sandy clay loam soil (Durner's multimodal pore system).....	33
13.	Potassium sorption isotherm of sandy loam soil (linear model) ...	35
14.	Potassium sorption isotherm of sandy loam soil (two-site sorption model).....	35
15.	Potassium sorption isotherm of sandy soil (linear model).....	35
16.	Potassium sorption isotherm of sandy soil (two-site sorption model) .....	36
17.	Potassium sorption isotherm of sandy clay loam soil (linear model) .....	36

18.	Potassium sorption isotherm of sandy clay loam soil (two-site sorption model) .....	36
19.	Soil moisture distribution in soil column of sandy loam soil with low potassium application at different transport models .....	37
20.	Soil moisture distribution in soil column of sandy loam soil with medium potassium application at different transport models ....	37
21.	Soil moisture distribution in soil column of sandy loam soil with high potassium application at different transport models .....	38
22.	Soil moisture distribution in soil columns of sandy loam soil with different K application rates (experimental data) .....	38
23.	Potassium distribution with depth for different K input concentration for sandy loam soil (Experimental data) .....	39
24.	Potassium distribution with depth for low K input concentration, 12.5 mg/l (modeling data) according to different transport models for sandy loam soil .....	39
25.	Potassium distribution with depth for medium K input concentration, 100 mg/l (modeling data) according to different transport models for sandy loam soil .....	40
26.	Potassium distribution with depth for high K input concentration, 200 mg/l (modeling data) according to different transport models for sandy loam soil.....	40
27.	Distribution of sorbed K on soil matrix for low input concentration (12.5 mg/l) according to different transport models for sandy loam soil .....	41
28.	Distribution of sorbed K on soil matrix for medium input concentration (100 mg/l) according to different transport models for sandy loam soil .....	41
29.	Distribution of sorbed K on soil matrix for high input concentration (200 mg/l) according to different transport models for sandy loam soil .....	41
30.	Sorbed potassium distribution with depth for different K input concentrations (Experimental data) for sandy loam soil.....	42

31.	Cumulative water flux for sandy loam soil at low K application with different transport models .....	43
32.	Cumulative water flux for sandy loam soil at medium K application with different transport models.....	43
33.	Cumulative water flux for sandy loam soil at high K application with different transport models.....	43
34.	Cumulative water flux for the sandy loam soil of different K input concentrations (Experimental data) .....	44
35.	Cumulative K flux for sandy loam soil column at low K application rate with different transport models.....	44
36.	Cumulative K flux for sandy loam soil column at medium K application rate with different transport models.....	45
37.	Cumulative K flux for sandy loam soil column at high K application rate with different transport models .....	45
38.	Cumulative K flux for sandy loam soil of the three K input concentrations (Experimental data) .....	45
39.	Soil moisture distribution in soil column of sandy soil with low potassium application at different transport models.....	46
40.	Soil moisture distribution in soil column of sandy soil with medium potassium application at different transport models.....	46
41.	Soil moisture distribution in soil column of sandy soil with high potassium application at different transport models.....	47
42.	Soil moisture distribution in soil columns of sandy soil with different K application rates (experimental data).....	47
43.	Potassium distribution with depth for different K input concentration for sandy soil (Experimental data).....	48
44.	Potassium distribution with depth for low K input concentration, 12.5 mg/l (modeling data) according to different transport models for sandy soil.....	48
45.	Potassium distribution with depth for medium K input concentration, 100 mg/l (modeling data) according to different transport models for sandy soil.....	49

46.	Potassium distribution with depth for high K input concentration, 200 mg/l (modeling data) according to different transport models for sandy soil.....	49
47.	Distribution of sorbed K on soil matrix for low input concentration (12.5 mg/l) according to different transport models for sandy soil.....	50
48.	Distribution of sorbed K on soil matrix for medium input concentration (100 mg/l) according to different transport models for sandy soil.....	50
49.	Distribution of sorbed K on soil matrix for high input concentration (200 mg/l) according to different transport models for sandy soil.....	50
50.	Sorbed potassium distribution with depth for different K input concentrations for sandy soil (Experimental data).....	51
51.	Cumulative water flux for sandy soil at low K application with different transport models .....	52
52.	Cumulative water flux for sandy soil at medium K application with different transport models.....	52
53.	Cumulative water flux for sandy soil at high K application with different transport models.....	52
54.	Cumulative water flux for sandy soil for K application concentration (experimental data) .....	53
55.	Cumulative K flux for sandy soil column at low K application rate with different transport models.....	53
56.	Cumulative K flux for sandy soil column at medium K application rate with different transport models.....	54
57.	Cumulative K flux for sandy soil column at high K application rate with different transport models.....	54
58.	Cumulative K flux for sandy soil of K input concentrations (Experimental data) .....	55
59.	Soil moisture distribution in soil column of sandy clay loam soil with low potassium application at different transport models.....	55

60.	Soil moisture distribution in soil column of sandy clay loam soil with medium potassium application at different transport models .....	56
61.	Soil moisture distribution in soil column of sandy clay loam soil with high potassium application at different transport models...	56
62.	Soil moisture distribution in soil columns of sandy clay loam soil with different K application rates (experimental data).....	57
63.	Potassium distribution with depth for different K input concentration for sandy clay loam soil (Experimental data).....	57
64.	Potassium distribution with depth for low K input concentration, 12.5 mg/l (modeling data) according to different transport models for sandy clay loam soil .....	58
65.	Potassium distribution with depth for medium K input concentration, 100 mg/l (modeling data) according to different transport models for sandy clay loam soil.....	58
66.	Potassium distribution with depth for high K input concentration, 200 mg/l (modeling data) according to different transport models for sandy clay loam soil.....	58
67.	Distribution of sorbed K on soil matrix for low input concentration (12.5 mg/l) according to different transport models for sandy clay loam soil.....	59
68.	Distribution of sorbed K on soil matrix for medium input concentration (100 mg/l) according to different transport models for sandy clay loam soil.....	59
69.	Distribution of sorbed K on soil matrix for high input concentration (200 mg/l) according to different transport models for sandy clay loam soil.....	60
70.	Sorbed potassium distribution with depth for different K input concentrations for sandy clay loam soil (Experimental data)...	60
71.	Cumulative water flux for sandy clay loam soil at low K application with different transport models.....	61
72.	Cumulative water flux for sandy clay loam soil at medium K	61

	application with different transport models.....	
73.	Cumulative water flux for sandy clay loam soil at high K application with different transport models.....	62
74.	The experimental data of cumulative water flux for sandy clay loam soil at the three K applications.....	62
75.	Cumulative K flux for sandy clay loam soil column at low K application rate with different transport models.....	63
76.	Cumulative K flux for sandy clay loam soil column at medium K application rate with different transport models.....	63
77.	Cumulative K flux for sandy clay loam soil column at high K application rate with different transport models.....	63
78.	The experimental data of cumulative K flux for sandy clay loam soil at the three K applications.....	64
