

## LIST OF FIGURES

Figure		Page
(1)	Evacuation of an extradural hematoma	14
(2)	CT brain showing images of EDHs	18
(3)	Distribution of studied sample according to severity of head injury according to GCS	24
(4)	Site of hematoma	26
(5)	Laterality of the hematoma	27
(6)	Distribution of studied sample according to onset	28
(7)	Definitive management	29
(8)	Time of intervention	29
(9)	Distribution of studied sample according to outcome	30
(10)	Distribution of studied sample according to associated injuries	32
(11)	Relation between outcome and pupillary changes	37
(12)	Relation between outcome and severity of head injury according to GCS	39
(13)	Relation between outcome and time of intervention	40
(14)	Relation between outcome with definitive management	42
(15)	Case 1: A 40 years old male patient presented with right temporal extradural hematoma sized 45 ml and GCS of 10 and managed by surgical route.	43
(16)	Case2: A 23 years old female patient presented with right parietal extradural hematoma sized 40 ml and GCS of 13 and managed by surgical evacuation.	44
(17)	Case 3: A 26 years old male presented with right frontal extradural hematoma managed surgically.	45
(18)	Case 4: a 25 male patient presented with left parietal extradural hematoma sized 15 ml and GCS 15 managed conservatively by follow up.	46
(19)	Case5:A 33years old female patient presented with left occipital extradural hematoma sized 10ml managed consevatively by follow up.	46
(20)	(A) First CT scan and GCS 15. (B) 4 hours later with GCS 12, managed surgically.	47

## **LIST OF ABBREVIATIONS**

<b>CT</b>	: Computed Tomography
<b>DEH</b>	: Delayed Extradural Hematoma
<b>EDH</b>	: Extradural Hematoma
<b>GCS</b>	: Glasgow Coma Score Scale
<b>GOS</b>	: Glasgow Outcome Scale
<b>ICP</b>	: Intra Cranial Pressure
<b>PFEDH</b>	: Posterior Fossa Extra Dural Hematoma
<b>RTA</b>	: Road Traffic Accident
<b>TBI</b>	: Traumatic Brain Injury
