LIST OF ABBREVIATIONS	V
I. INTRODUCTIN	1
II. REVIW OF LITRATURE	3
III. MATERIALS AND METHODS	12
IV. RESULTS	31
4.1. Biological studies	31
4.1.1. Mechanical isolation of BtMV and symptoms on test plants	31
4.1.2. Aphid transmission	35
4.1.3 Ultrastructural of infected leaves	35
4.1.4. Virus purification and negative staining	35
4.2. Chemical studies	38
4.2.1. Determination of viral coat protein molecular weight	38
4.2.2. Extraction and analysis of viral RNA	38
4.2.3. RT-PCR isolation of BtMV- <i>cp</i> gene	40
4.3. Serological studies	40
4.3.1. Antisera production	40
4.3.2. Evalution of BtMV-antiserum	42
4.3.2.1. TBIA	42
4.3.2.2. DBIA	43
4.4. Effect of BtMV on sugar beet growth and some chemical constituents	45
V. DISCUSSION	56
VI. SUMMARY	63
VII. EFERENCES	66
ARABIC SUMMARY	

LIST OF TABLES

	Page
Table 1. Viruses infecting sugar beet	4
Table 2. Name and sequences of the primers used for ISSR detection	14
Table 3. SDS-PAGE solutions for preparing gels	23
Table 4. RT-PCR reaction components for RT-PCR isolation of <i>cp</i> gene of BtMV	25
Table 5. Injection schedule for raising BtMV specific antiserum	26
Table 6. Symptomatology of natural infected sugar beet plants .	31
Table 7. Symptomatology of BtMV isolate on tested plants	33
Table 8. Insect transmission of the virus isolate from infected leaves of <i>B. vulgaris</i> cv. Gazel plants by two different aphids in non-persistent	35
Table 9. Purity testing of BtMV purified preparations obtained from infected sugar beet leaves using spectrophotometer	41
Table 10. DEP of BtMV purified IgGs using indirect ELISA after one, two and three weeks post last injection	44
Table 11. The effect of BtMV on fresh and dry wight of shoots and roots of some sugar beet cultivars	46
Table 12. The effect of BtMV on some chemical constituents of some sugar beet cultivars	49
Table 13. Similarities between the sugar beet (<i>B. vulgaris</i>) cultivars based on ISSR using six primers	55

LIST OF FIGURES

	Page	
Fig.1	Proposed genomic map of BtMV and sequencing strategy	8
Fig.2	Naturally BtMV-like symptoms on <i>B. vulgaris</i> cv. Gazel	34
Fig.3	The external symptoms on different sugar beet cultivars caused by BtMV	34
Fig.4	Electron micrographs of ultrathin section of mesophyll cells of sugar beet leaf plants	36
Fig.5	Electron micrographs of ultrathin section of mesophyll cells of sugar beet leaf plants	36
Fig.6	Ultraviolet-absorption spectrum of BtMV purified preparations	37
Fig.7	Electron micrograph of purified BtMV, stained with 2% uranyl acetate	37
Fig.8	Electrophoresis of BtMV-coat protein in 12 % SDS-PAGE	38
Fig.9	Ultraviolet absorption spectrum of BtMV-RNA	39
Fig.10	Agarose gel electrophoresis of BtMV-RNA extracted from viral purified particles	39
Fig.11	RT-PCR reaction in 1.0% agarose gel stained with ethidium bromide	40
Fig.12	Tissue blot immunoassay for BtMV using sugar beet infected and healthy leaf tissues	42
Fig.13	Dot blot immunobinding assay for BtMV in a serial of ten fold dilutions of infected sugar beet sap	43
Fig.14	Effect of BtMV on fresh and dry shoot weight of some sugar beet cultivars	45
Fig.15	Effect of BtMV on fresh and dry root weight of some sugar beet cultivars	45
Fig.16	Effect of BtMV on sucrose content of some sugar beet cultivars	47
Fig.17	Effect of BtMV on amino nitrogen of some sugar beet cultivars	47
Fig.18	Effect of BtMV on sodium content of some sugar beet cultivars	48
Fig.19	Effect of BtMV on potassium content of some sugar beet cultivars	48

IV

Fig.20	ISSR-PCR variation of DNA genome of different cultivars of <i>B. vulgaris</i>	52
Fig.21	ISSR-PCR variation of DNA genome among <i>B. vulgaris</i> cvs	52
Fig.22	ISSR-PCR variation of DNA genome among <i>B. vulgaris</i> cvs	53
Fig.23.	ISSR-PCR variation of DNA genome among <i>B. vulgaris</i> cvs	53
Fig.24	ISSR-PCR variation of DNA genome among <i>B. vulgaris</i> cvs	54
Fig.25	ISSR-PCR variation of DNA genome among <i>B. vulgaris</i> cvs	54
Fig.26	Phylogenetic tree of DNA genome of 10 Sugar beet (<i>B. vulgaris</i>) cultivars based on ISSR analysis using 6 primers	55
