

ABSTRACT

Mobile communication systems face a great challenge due to the raised user expectations of quality of service and the rapid growth of the data traffic. The performance of cellular systems is mainly limited because of the presence of inter-cell interference e.g., the spectrum efficiency, peak data rate, cell-edge data rate. The cooperation between base stations (BSs) which is known as coordinated multi-point (CoMP) transmission/reception is one of the most important way to combat inter-cell interference. Coordinated multipoint can either coordinate or exploit the interference to improve the system throughput and the user fairness.

For systems beyond 4G, further enhancement of the system throughput and user fairness is required considering the recent exponential increase in the volume of mobile traffic and the needs for enhanced delay high volume services such as video streaming. To accommodate such requirements, non-orthogonal multiple access can again be a promising candidate as a downlink wireless access scheme for systems beyond the fourth generation. To make non-orthogonal multiple access favorable and promising, it should be used with advanced reception techniques such as a successive interference cancellation (SIC) which is different from the third generation mobile communication system.

This thesis explores the performance of coordinated multipoint transmission and reception techniques using Non Orthogonal Multiple Access (NOMA) with superposition coding in heterogeneous network, comparing with orthogonal multiple access (OMA), evaluating user and cell throughput.

ACKNOWLEDGMENTS

First and foremost I'm very thankful to **ALLAH** for giving me the will, patience and means to work in this thesis and finish it.

Foremost, I would like to express my sincere gratitude to my advisor Professor Essam Sourour for the continuous support of my PhD study and research, for his patience, motivation, enthusiasm, and immense knowledge. His guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better advisor and mentor for my PhD study.

I owe my deepest to my family – my mother and father who have always stood by me, gave me endless patience and love and guided me through my career. I owe them every achievement and success I would make in my whole life.

I thank my fellow colleagues in my work: Dr.Tarek Elshenawy, Hossam Ahmed, and Ahmed Eldesoukey for helping me in my PhD study

Special thanks to my dear wife who has always been surrounding me with her love and care.

CONTENTS

CHAPTER I: INTRODUCTION.....	1
1.1 PRELIMINARIES.....	1
1.2 3GPP STANDARD RELEASES FOR LTE.....	2
1.2.1 3GPP Release 8.....	3
1.2.2 3GPP Release 9.....	3
1.2.3 3GPP Release 10.....	4
1.2.4 3GPP Release 11.....	5
1.2.5 3GPP Release 12.....	5
1.3 THESIS PURPOSE.....	6
1.4 SUMMARY OF CONTRIBUTION.....	6
1.5 THESIS OVERVIEW.....	6
CHAPTER II: LTE-A KEY TECHNOLOGIES.....	8
2.1 LONG TERM EVOLUTION ADVANCED (LTE-A).....	8
2.1.1 Overall Architecture.....	8
2.1.2 LTE Physical Layer.....	9
2.1.2.1 Multiplexing Schemes.....	9
2.1.2.1.1 Downlink.....	9
2.1.2.1.2 Uplink.....	9
2.1.2.2 LTE Frame Structure.....	10
2.1.2.3 Downlink Physical Resource Block.....	10
2.1.2.4 Cyclic Prefix (CP).....	11
