

List of Tables

Table No.	Title	Page No.
1	gender, age of each patient, implant length, diameter and site of its placement	63
2	Indices Used to Assess Plaque Accumulation Around Oral Implants	64
3	indices used to assess marginal mucosal conditions around oral implants	66
4	the mean value standard deviation and student's t-test (p-value) of the peri-implant sulcus depth (PSD) in all surfaces around the implants	67
5	comparison between group A and group B. (The Peri-implant sulcus depth (PSD) in all surfaces around the implants.	69
6	the mean differences, standard deviation (SD) value and results of paired-test for changes by time in mean bone loss at mesial and distal sides of the implants.	71
7	comparison between group A and B (bone height by time for mesial and distal side of the implants	72

List of Figures

FIGURE No.	Title	Page No.
1.	Salvin Titanium Bone Tack Kit	54
2.	Geistlich Bio-Gide	55
3.	Geistlich Bio-Oss	55
4.	Complete Surgical Tray Contents Spectra & Legacy TM	56
5.	Legacy 1 Implant	57
6.	Preoperative Cone Beam (CBCT)	57
7.	Preoperative Photograph for case NO3	58
8.	Placement of bone graft (Bio-Oss) over surgical defect.	58
9.	Placement of a membrane fixed by bone tacks over the defect.	59
10.	Suturing back the mucoperiosteal flap of the same case.	59
11.	Sutural removal of the same case after one week.	60
12.	Removal of the healing cap.	60
13.	Abutment in place.	61
14.	Restoration of crown.	61
15.	As we compare the probing depth at 1,3 and 6 months at the mesial, distal, buccal and lingual surface. As regards the mean ,stander deviation (S.D) and p- value of all surfaces. No significant difference was observed when comparing the values.	68
16.	As we compare the probing depth at 1,3and 6 months at the mesial,distal,buccal,and lingual between group A and groupB result in slight difference in means and stander deviation	69
17.	the mean differences, standard deviation (SD) value and results of paired-test for changes by time in mean bone loss at mesial and distal sides of the implants	71
