

# ACKNOWLEDGMENT

*First of all, I wish to express my deepest gratitude and thanks to GOD almighty for help and endurance offered to me to accomplish this work.*

*I would like to express my sincere thanks, profound gratitude and appreciation to **Prof. Dr. Wafaa Saad Ragab**, Professor of Chemical Pathology, Medical Research Institute, Alexandria University, for her kind supervision, precious guidance, constant encouragement, generous help and cooperation from the start to the end of this study. The whole work would not have been possible without her support. It is an honor to be supervised by her.*

*My sincere appreciation is especially expressed to **Dr. Moyassar Ahmad Mohamad Zaki**, Assistant Professor of Chemical Pathology, Medical Research Institute, Alexandria University, for his valuable advice, continuous guidance and great care throughout the work. I am truly indebted and thankful for him.*

*I would like to devote my deepest thanks and utmost gratitude for the sincere help, guidance and supervision of **Dr. Ragaa Abd El Kader Ramadan**, Lecturer of Chemical Pathology, Medical Research Institute, Alexandria University. Words cannot describe how grateful I am for her collaboration and supervision throughout the work, thanks for her unlimited help.*

*I would like to express my profound gratitude to **Dr. Lamia Ahmed EL Ghalid**, Lecturer of internal medicine, Medical Research Institute, Alexandria University, for her valuable assistance, efforts and her kind help and remark especially in clinical work.*

*I would like to thank all staff members and personnel of Chemical Pathology Department, Medical Research Institute, Alexandria University, for helping me to accomplish this work.*

*Last, but not least, I want to express my cordial feelings towards **my Family** especially my **lovely Wife**, I can hardly express my thanks for all what they had done for me. I would have never finished this thesis without their assistance and encouragement.*

## LIST OF TABLES

Table		Page
I.	DNA methyltransferases	9
II.	Child-Pugh scoring	31
III.	Child-Pugh classification	31
IV.	Primers for methylated SPINT2 gene	39
V.	Primers for unmethylated SPINT2 gene	39
VI.	Reagents of PCR amplification	39
VII.	Statistical analysis between the studied groups according to age and gender	46
VIII.	Comparison between the studied groups as regards some clinical data	48
IX.	Statistical analysis between the studied groups as regards some hematological parameters and INR.	50
X.	Statistical analysis of some biochemical parameters in the studied groups.	52
XI.	Serum alpha feto protein ( $\mu\text{g/L}$ ) in the studied groups .	54
XII.	HCV PCR viral load ( $*10^4$ IU/ml ) in the the patients subgroups .	56
XIII.	Statistical analysis of AFP and HCV PCR in the studied groups.	58
XIV.	Methylation status of SPINT2 gene promoter in the studied groups	59
(XV a)	Statistical analysis of the methylation status of SPINT2 gene promoter in the studied groups	61
(XV b)	Statistical analysis between the three studied groups according to methylation status (unmethylated vs aberrantly methylated)	62
(XV c)	Statistical analysis between the studied two major groups according to methylation status (unmethylated vs aberrantly methylated)	63
XVI.	Relation between methylation status with AFP and HCV PCR in patients (group I)	64
XVII.	Odd's ratio between the patients and control groups	65
XVIII.	Correlation between different parameters in HCV group	66
XIX.	Correlation between different parameters in HCC group	66
XX.	Correlation between different parameters in control group	67

# LIST OF FIGURES

<b>Figure</b>		<b>Page</b>
<b>(1)</b>	Nucleosome and histone modifications	<b>3</b>
<b>(2)</b>	Structure of DNA & Chromatin	<b>5</b>
<b>(3)</b>	DNA methylation mediated by DNA methyltransferases (DNMTs)	<b>7</b>
<b>(4)</b>	Propagation of methylation pattern to daughter cells	<b>9</b>
<b>(5)</b>	Effect of DNA methylation on gene expression	<b>10</b>
<b>(6)</b>	Diagram illustrating the gene regions.	<b>11</b>
<b>(7)</b>	Simplified scheme of the role of folate in DNA methylation	<b>13</b>
<b>(8)</b>	DNA methylation in normal and cancer cell.	<b>14</b>
<b>(9)</b>	Consecutive hemimethylated dyads of opposite orientation in normal and cancer cells are best explained by active demethylation	<b>16</b>
<b>(10)</b>	Chemistry of bisulphite conversion	<b>18</b>
<b>(11)</b>	Effect of bisulphite conversion on DNA sequence	<b>18</b>
<b>(12)</b>	Methyl specific PCR product on agarose gel	<b>20</b>
<b>(13)</b>	Chromosomal location of SPINT 2 gene	<b>26</b>
<b>(14)</b>	Genomic DNA run on 1% agarose gel	<b>36</b>
<b>(15)</b>	Amplified bisulfite converted DNA after MSP Using methylated primers on 2% agarose gel	<b>42</b>
<b>(16)</b>	Amplified bisulfite converted DNA after MSP Using unmethylated primers on 2% agarose gel	<b>43</b>
<b>(17)</b>	Box blots representing the median values of AFP in the studied groups	<b>55</b>
<b>(18)</b>	Box blots representing the median values of HCV PCR in the patients subgroups	<b>57</b>
<b>(19)</b>	Comparison between the studied groups according to methylation status of SPINT 2 gene promoter .	<b>60</b>
