LIST OF FIGURES

Figure		page
(1)	Composite graph estimating the probability of severe coronary artery disease on the basis of a 5 point risk score that awards 1 point for each of the following variables	**5**
(2)	Survival of medical treated patients with coronary artery disease according to ejection fraction (EF) and number of diseased vessels	**6**
(3)	Five year survival rate in patients according to severity and proximity of coronary artery lesions and adjusted hazard ration for coronary artery bypass grafting (CABG) vs medical treatment. 95% = 95% coronary artery stenosis	**9**
(4)	Motion and velocities are analyzed by calculating frame-to-frame changes using "natural acoustic tagging." New features (orange circles) keep coming into the image as old ones (yellow circles) fade away	**10**
(5)	Representative example of the measurement of segmental and global peak systolic longitudinal strain (PSLS) shown on bull's eye display from a patient with three- vessel CAD	**11**
(6)	Display of negative staintrend curves from 3 chamber view of a healthy person	**12**
(7)	Comparison between the three studied groups according to age	**23**
(8)	Comparison between the three studied groups according to gender	**23**
(9)	Comparison between the three studied groups according to risk factors	**25**
(10)	Comparison between the three studied groups according to final clinical diagnosis	**27**
(11)	Comparison between high-risk group and low-risk group according to coronary angiographic data	**30**
(12)	Comparison between high-risk group and low-risk group according to number of high stenotic lesions	**30**
(13)	Comparison of 2D STE measurement of longitudinal systolic strain in apical 3-ch view between case A from the high risk group and case B from the normal group. AVC: aortic valve closer, GS: global strain	**33**
(14)	Comparison between the three studied groups according to G peak SL (APLAX)	**34**
(15)	Comparison between the three studied groups according to G peak SL (A4C).	**34**
(16)	Comparison of 2D STE measurement of longitudinal systolic strain in apical 4-ch view between case A from the high risk group and case B from	**35**

	the normal group. AVC	
(17)	Comparison between the three studied groups according to G peak SL (A2C).	**36**
(18)	Comparison between the three studied groups according to global peak systolic longitudinal strain	**38**
(19)	Comparison between the three studied groups according to basal peak systolic longitudinal strain	**38**
(20)	Comparison between the three studied groups according to mid peak systolic longitudinal strain	**39**
(21)	Comparison between the three studied groups according to apical peak systolic longitudinal strain	**39**
(22)	Comparison between the three studied groups according to basal and mid peak systolic longitudinal strain	**40**
(23)	Comparison of the strain curves and bull's eye derived from all three apical views in a quad format between case A from the high risk group and case B from the normal group this allows the user to correlate the strain curves with the bull's eye	**41**
(24)	Comparison of 2D STE measurement of segmental and global peak systolic longitudinal strain (PSLS) in bull's eye display between case A from the high risk group and case B from the normal group	**42**
(25)	ROC curve for G peak SL (AVG) to diagnose high risk patients	**43**
(26)	ROC curve for Basal PSLS to diagnose high risk patients	**44**
(27)	ROC curve for Mid PSLS to diagnose high risk patients	**44**
(28)	ROC curve for Apical PSLS to diagnose high risk patients	**45**
(29)	ROC curve for Basal and Mid PSLS to diagnose high risk patients	**45**

LIST OF ABBREVIATION

2D	**:**	Two-dimensional
2DSE	**:**	Two dimensional strain echocardiography
2D-STE	**:**	Two dimensional Speckle-tracking echocardiography
3D	**:**	Three-dimensional
A2C	**:**	Apical two chamber
A3C	**:**	Apical three chamber
A4C	**:**	Apical four chamber
AFI	**:**	Automated function imaging
APLAX	**:**	Apical long axsis
AUC	**:**	Area under the curve
AVC	**:**	Aortic valve closure
AVG	**:**	Average
BBB	**:**	Bundle branch block
CABG	**:**	Coronary artery bypass grafting
CAD	**:**	Coronary artery disease
CCS	**:**	Canadian Cardiovascular Society
CT	**:**	Computed tomography
EF	**:**	Ejection fraction
G	**:**	Global
GLPSS	**:**	Global longitudinal peak systolic strain
GPSS	**:**	Global peak systolic strain
GS	**:**	Global strain
HFNEF	**:**	Heart failure with normal ejection fraction
HSL	**:**	High grade stenotic lesions
LAD	**:**	Left anterior descending artery
LBBB	**:**	Left bundle branch block
LCX	**:**	Left circumflex artery
LM	**:**	Left main
LMCA	**:**	Left main coronary artery
LV	**:**	Left ventricular
LVEDV	**:**	Left ventricular end diastolic volume
LVESV	**:**	Left ventricular end systolic volume
MI	**:**	Myocardial infarction
MRI	**:**	Magnetic resonance imaging
PCI	**:**	Percutaneous coronary intervention
PET	**:**	Positron emission tomography
PSLS	**:**	Peak systolic longitudinal strain
RCA	**:**	Right coronary artery

obeikandi.com

ROC	**:**	Receiver operating characteristic
ROI	**:**	A region of interest
RV	**:**	Right ventricular
RWMA	**:**	Regional wall motion abnormalities
SL	**:**	Strain longitudinal
SPECT	**:**	Single photon emission computed tomography
STE	**:**	Speckle-tracking echocardiography
STEMI	**:**	ST-elevation myocardial infarction
TDI	**:**	Tissue Doppler imaging
TIMI	**:**	Thrombolysis in moyocardial infarction
V.P.Cs	**:**	Ventricular premature contractions
VD	**:**	Number of diseased vessels
