

LIST OF TABLES

	Page
Table 2.1 Historical development of cathodic protection technology	9
Table 2.2 Cathodic protection design current densities	10
Table 3.1 Energy use and CO ₂ emission in the EU-15 industry	32
Table 3.2 Japanese finished steel production, 1999 (MITI, 2000)	38
Table 3.3 Classification of steel and iron industries	45
Table 3.4 average values of average corrosion penetration on steel piles and steel sheet piles	56
Table 5.1 Material loss of anodes	79
Table 5.2 The metal loss in the coupons of the three plates [mg]	80
Table 5.3 Material loss and loss rate in different parts of the three plates	86

LIST OF FIGURES AND PHOTOS

<i>Chapter (1)</i>	
Figure 1.1 Metallurgy in reverse	4
Figure 1.2 Corrosion mechanism	4
Figure 1.3 Methods of corrosion control	5
Figure 1.4a Cathodic protections with sacrificial anodes	6
Figure 1.4b Cathodic protections with impressed current	7
<i>Chapter (3)</i>	
Figure 3.1 Ecological footprints of iron and steel productions	57
Figure 3.2 product systems from a life cycle perspective	58
Figure 3.3 Emissions of the product systems included in the LCA study Temperature Using Three-Electrode Test Cell.	59

Figure 3.4 Framework for the total environmental impact assessment of production stages, arranged	60
Chapter (4)	
Figure 4.1 A schematic diagram showing the main features of the experimental test set up showing the three plates, anodes, basins, electrolyte, DC supply, measuring electrode and instruments.	69
Figure 4.2 Distribution of coupons on the plate surface	69
Photo 4.1 General view of the three basins X, Y and Z	70
Photo 4.2 Plate-X at the end of testing (front and back)	71
Photo 4.3 Plate-Y at the end of testing (front and back)	71
Photo 4.4 Plate-Z at the end of testing (front and back)	71
Photos 4.5 The three sets of coupons on their wooden plates	72
Figure 4.3 The dimensions of the anodes.	73
Photo 4.6 The three anodes at the end of testing and the multimeter	73
Figure 4.4 Electric circuit diagram of the impressed CP current.	74
Photo 4.7 The DC power supply	74
Figure 4.5 The short electrode, 150 mm length.	75
Photo 4.8 The short and long electrodes	75
Figure 4.6 Locations of the measuring points at a plane perpendicular to the plate surface at three different planes under the water level and six different points in-line passing through the plate vertical center line.	76
Figure 4.7 Locations of the measuring points parallel to the plate surface pointing to the mid-point between the coupons centers at a plane 25 mm from the plate	77
Chapter (5)	
Figure 5.1 Daily potential difference measurement for the three plates, mV	87

Figure 5.2 Metal loss distribution patterns in coupons over unprotected Plate-X a) front, back	87
Figure 5.3 Metal loss distribution patterns in coupons over Plate-Y protected from front side a) front, back	88
Figure 5.4 Metal loss distribution patterns in coupons over full protected Plate-Z a) front, back	88
Figure 5.5 Mass loss rate distribution pattern of Plate-X	89
Figure 5.6 Mass loss rate distribution pattern of Plate-Y	89
Figure 5.7 Mass loss rate distribution pattern of Plate-Z	89
Figure 5.8 electrolyte/Plate-Y 3-D and contour Potential difference in a plane parallel to the protected side of Plate-Y at a distance 25 mm.	90
Figure 5.9 electrolyte/Plate-Y 3-D and contour Potential difference in a plane parallel to the unprotected side of Plate-Y at a distance 25 mm.	91
Figure 5.10 Comparison of electrolyte/Plate-Y PD from the protected and unprotected sides and the percentage difference between the two sides.	92
Figure 5.11 A typical electrolyte/Plate-Y potential difference measured in planes parallel to the plate 25 mm from the corresponding front and back sides, V	93
Figure 5.12 Rate of mass loss distribution of Plate-X	94
Figure 5.13 Rate of mass loss distribution of Plate-Y	95
Figure 5.14 Rate of mass loss distribution of Plate-Z	96
Figure 5.15 electrolyte/Plate-Y potential differences at both sides in a plane perpendicular the middle of the plate.	97
Photo 5.1 Plate-X electronic microscopic photographic	97
Photo 5.2 Plate-Y electronic microscopic photographic	98
Photo 5.3 Plate-Z electronic microscopic photographic	98

ABBREVIATIONS

AMD	Acid Mine Drainage
As	Arsenic
BAU	Business As Usual
BF	Blast Furnace
BOF	Basic Oxygen Furnace
EAFF	Electric Arc Furnace
EPA	Environment Protection Agency
ETL	Electrolytic Tinning Lines
EU	European Unity
EU-15	The 15 European Countries
GHG	Green House Gas
HMWPAHs	Heavy Molecular Weight Polycyclic Aromatic Hydrocarbons
IARC	International Agency for Research on Cancer
IPCC	Intergovernmental Panel on Climate Change
IPPC	Integrated Pollution Prevention and Control
KP	Koyoto Protocol
LCA	Life Cycle Assessment
LCI	Life Cycle Inventory
MTOE	Million Ton Oil Equivalent
OECD	Countries of Eastern Europe and the Former Soviet Union
PAHs	Polycyclic Aromatic Hydrocarbons
SPM	Suspended Particulate Material
UNFCCC	United Nations Framework Convention on Climate Change
