On the beach, we see many beautiful sights.
We listen to the sea waves, and we touch the
soft sand.

We smell the sea air, and we taste the wonderful
sea food.

How wonderful is it to get to know this vast world, created by God.

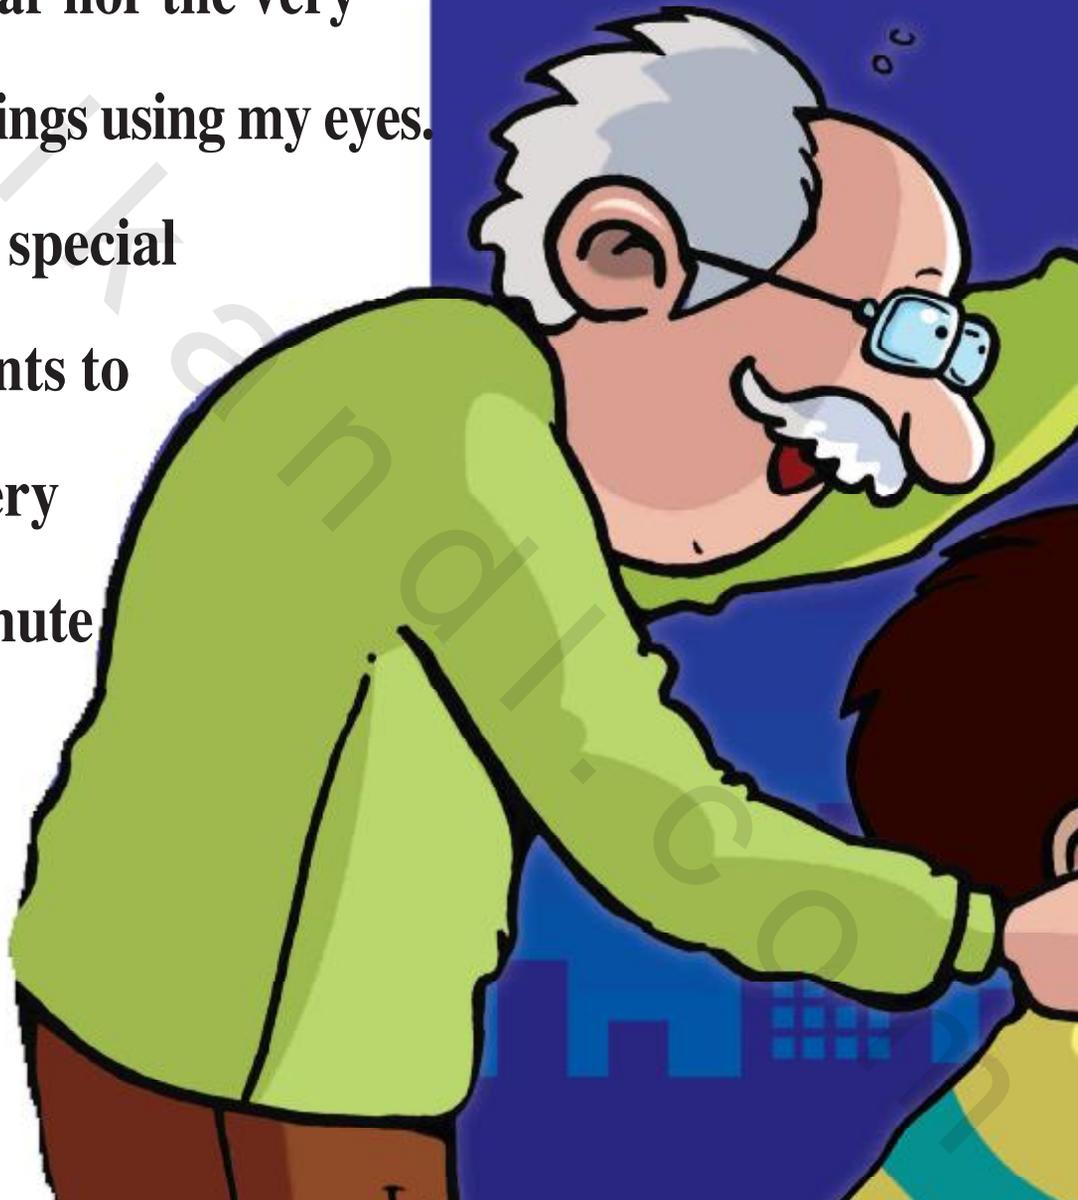

**We see with our own eyes the green trees,
the beautiful flowers and the birds with their
wonderful colors.**

**However, I can neither see
the very far nor the very
minute things using my eyes.**

**We need special
instruments to
see the very
far or minute
things.**

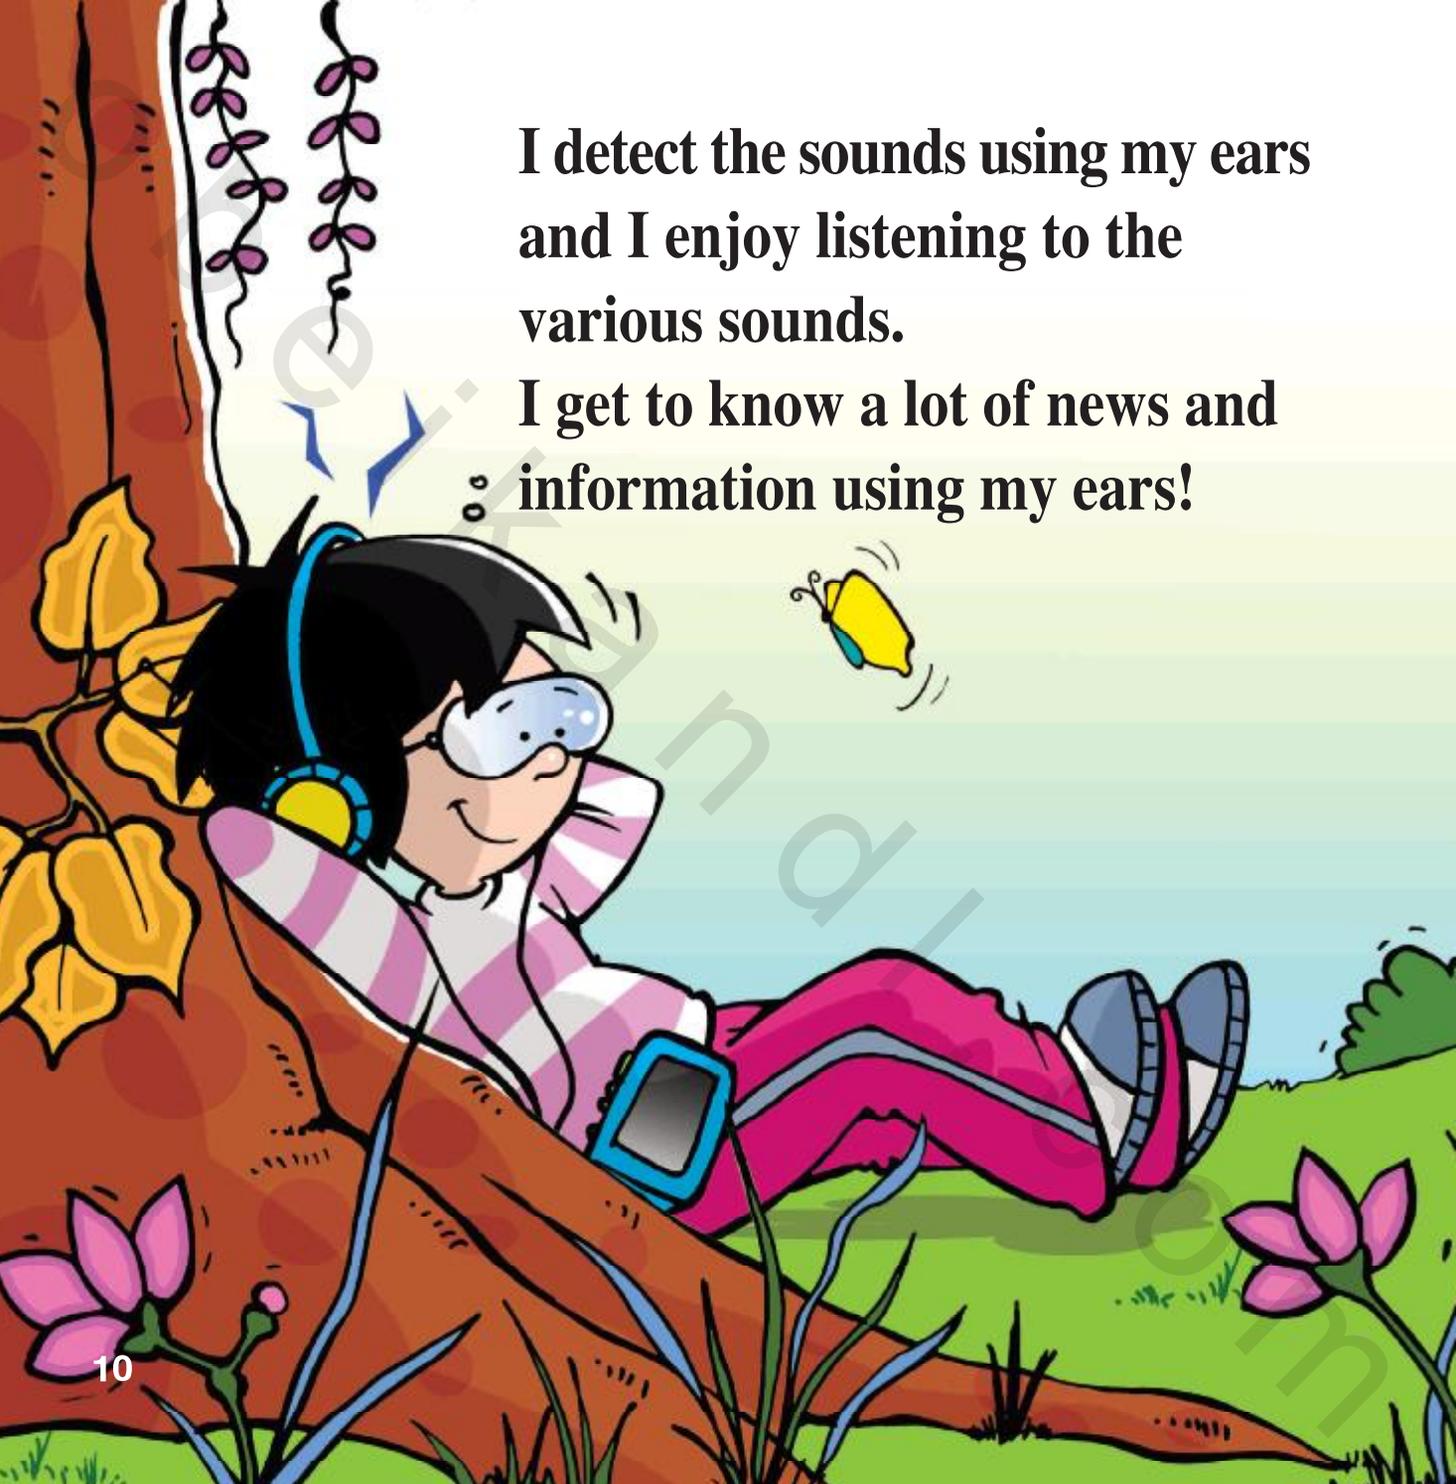

We use our eyes in reading and differentiating the different shapes and colors of things.

At the farm, there are many animals and birds.
They make different sounds.

I can detect the different kinds of animals and
birds just by listening to the sounds
they make without even seeing them.

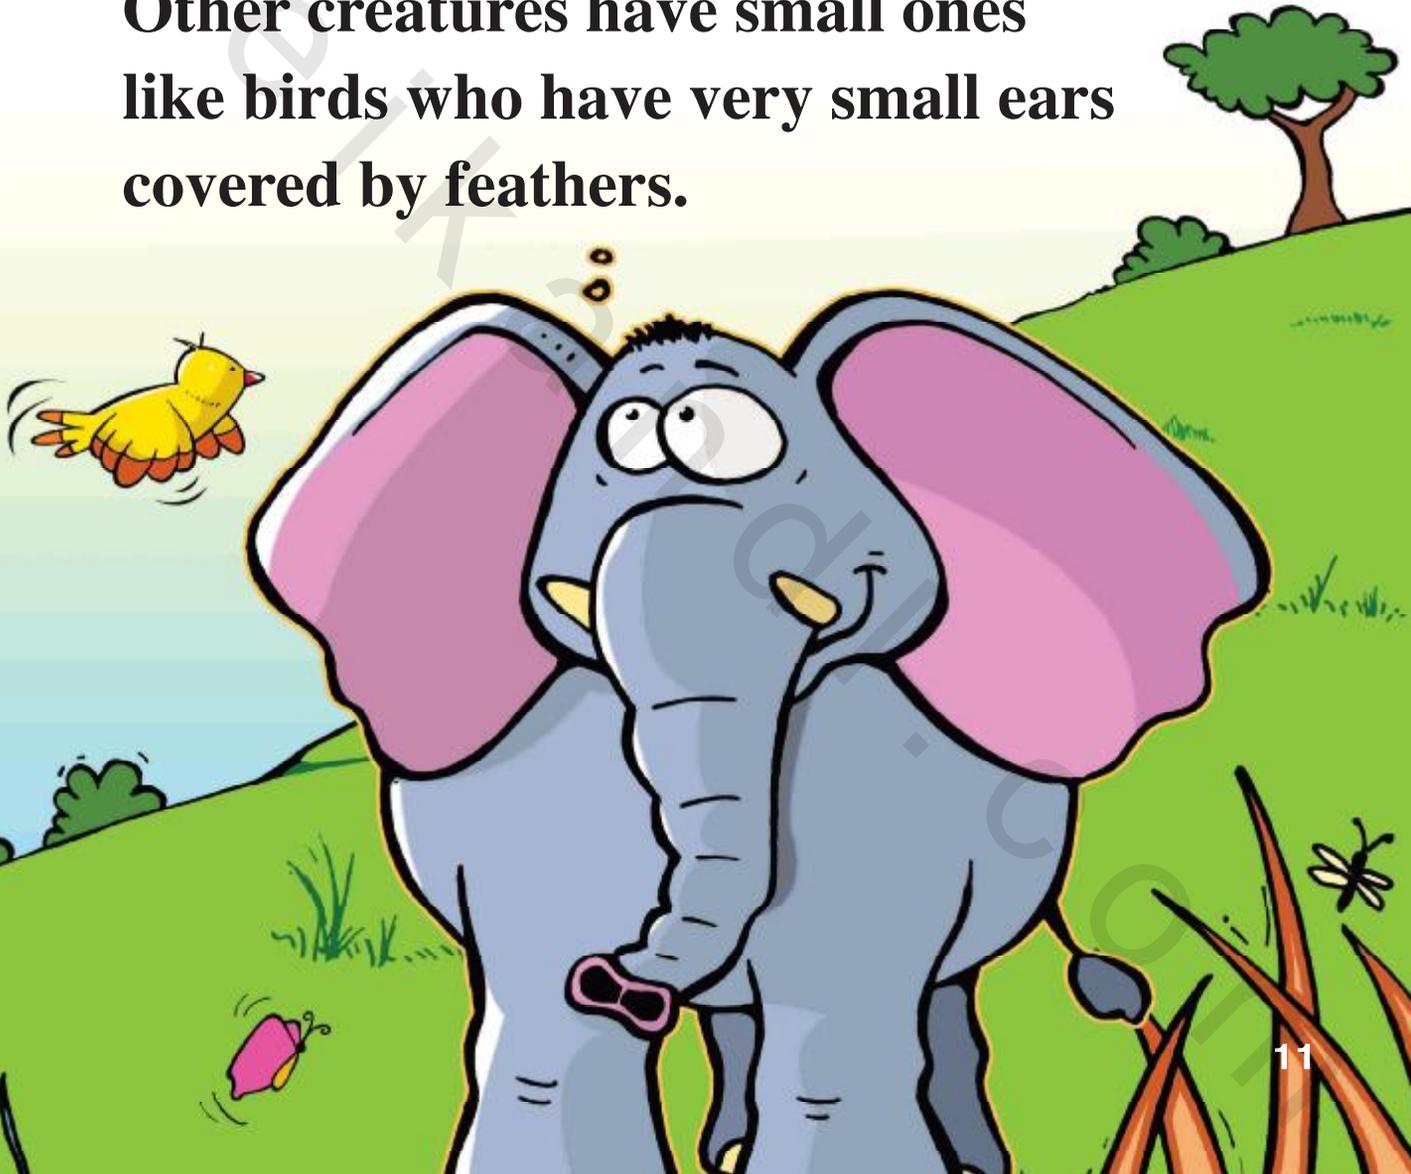

I detect the sounds using my ears
and I enjoy listening to the
various sounds.

I get to know a lot of news and
information using my ears!

○ Some creatures have very large ears like the elephant.

Other creatures have small ones like birds who have very small ears covered by feathers.

**Our ears do another great function for us.
They help us keep our balance while moving or
walking.**

Objects and things around us have different shapes and a different touch.

Some objects are hot, others are cold.

We can feel that when we touch them.

Our skin can tell the touch of
different objects and their heat.

**Some animals use their whiskers
to feel things such as the cat,
the dog, the lion and the tiger.**

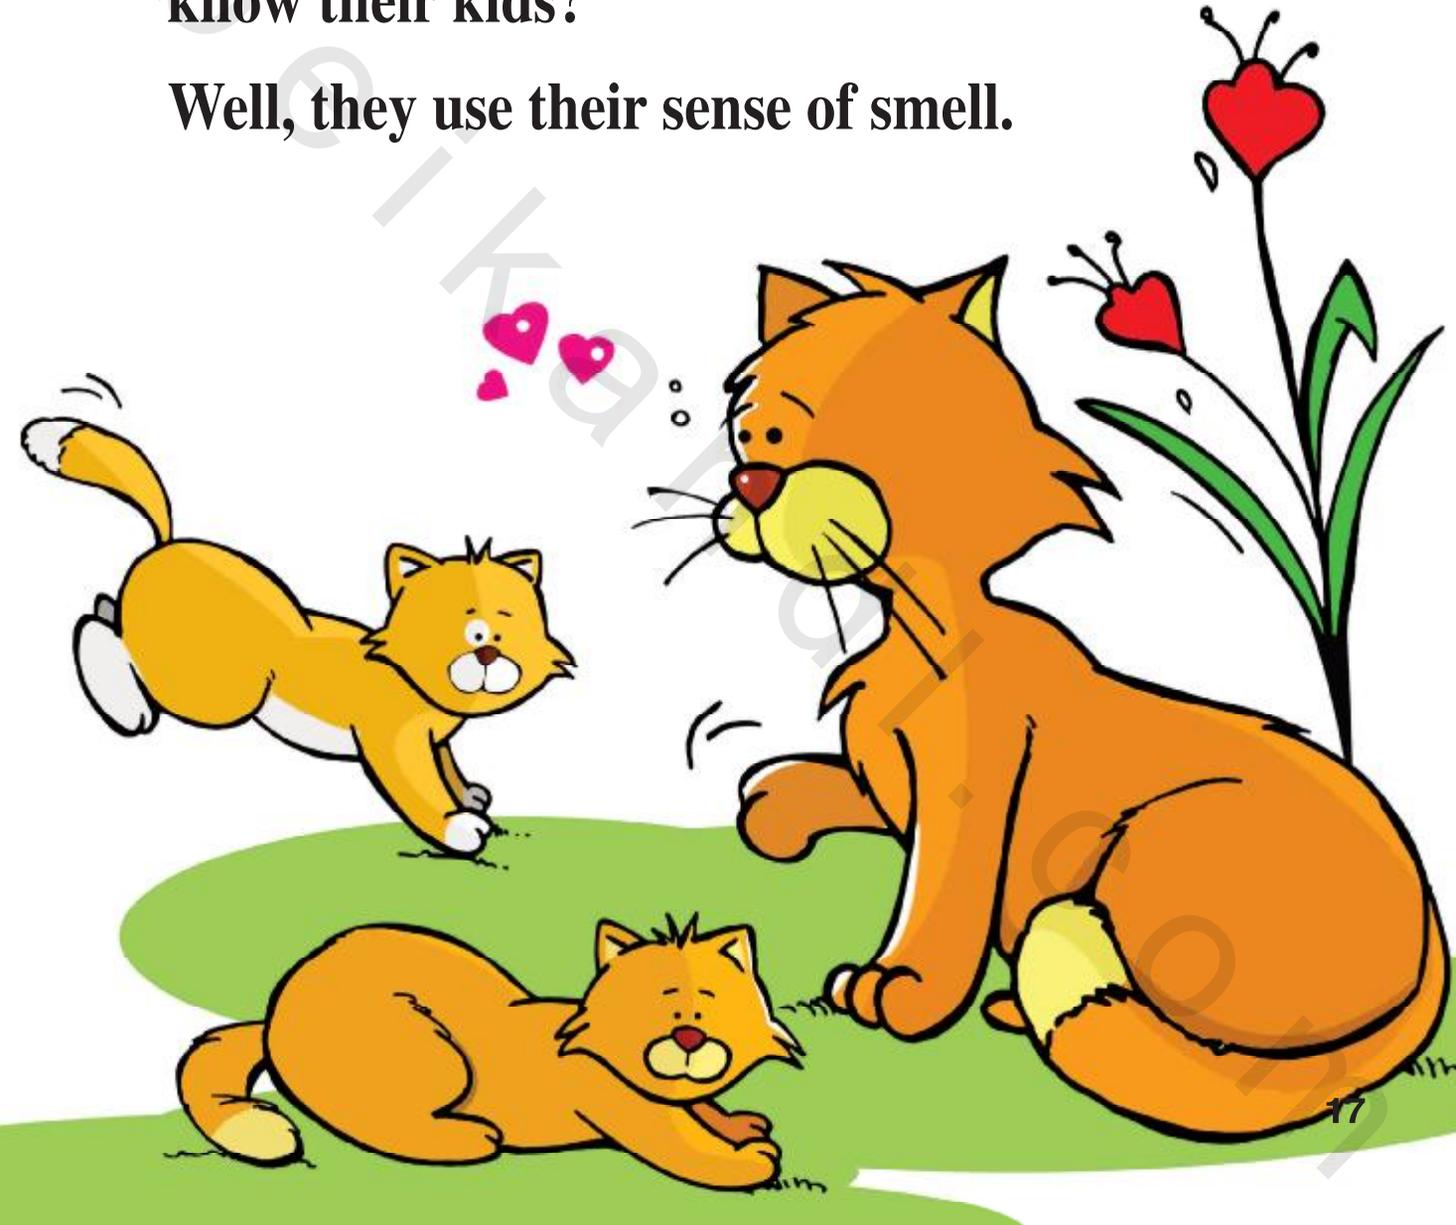

**We take care of our bodies and
our cleanliness everyday.**

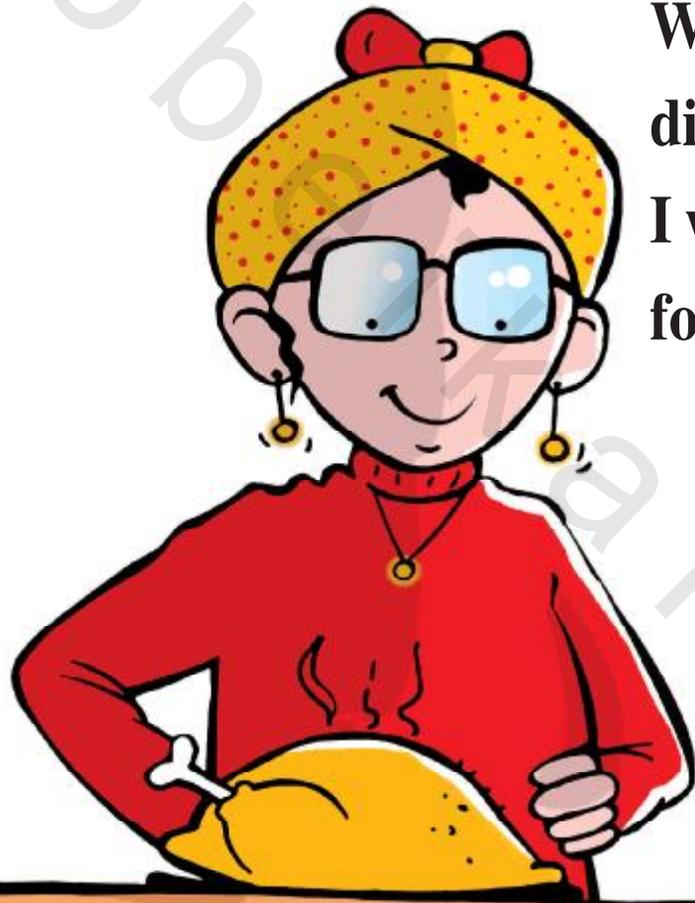

Do you know how animals get to know their kids?

Well, they use their sense of smell.

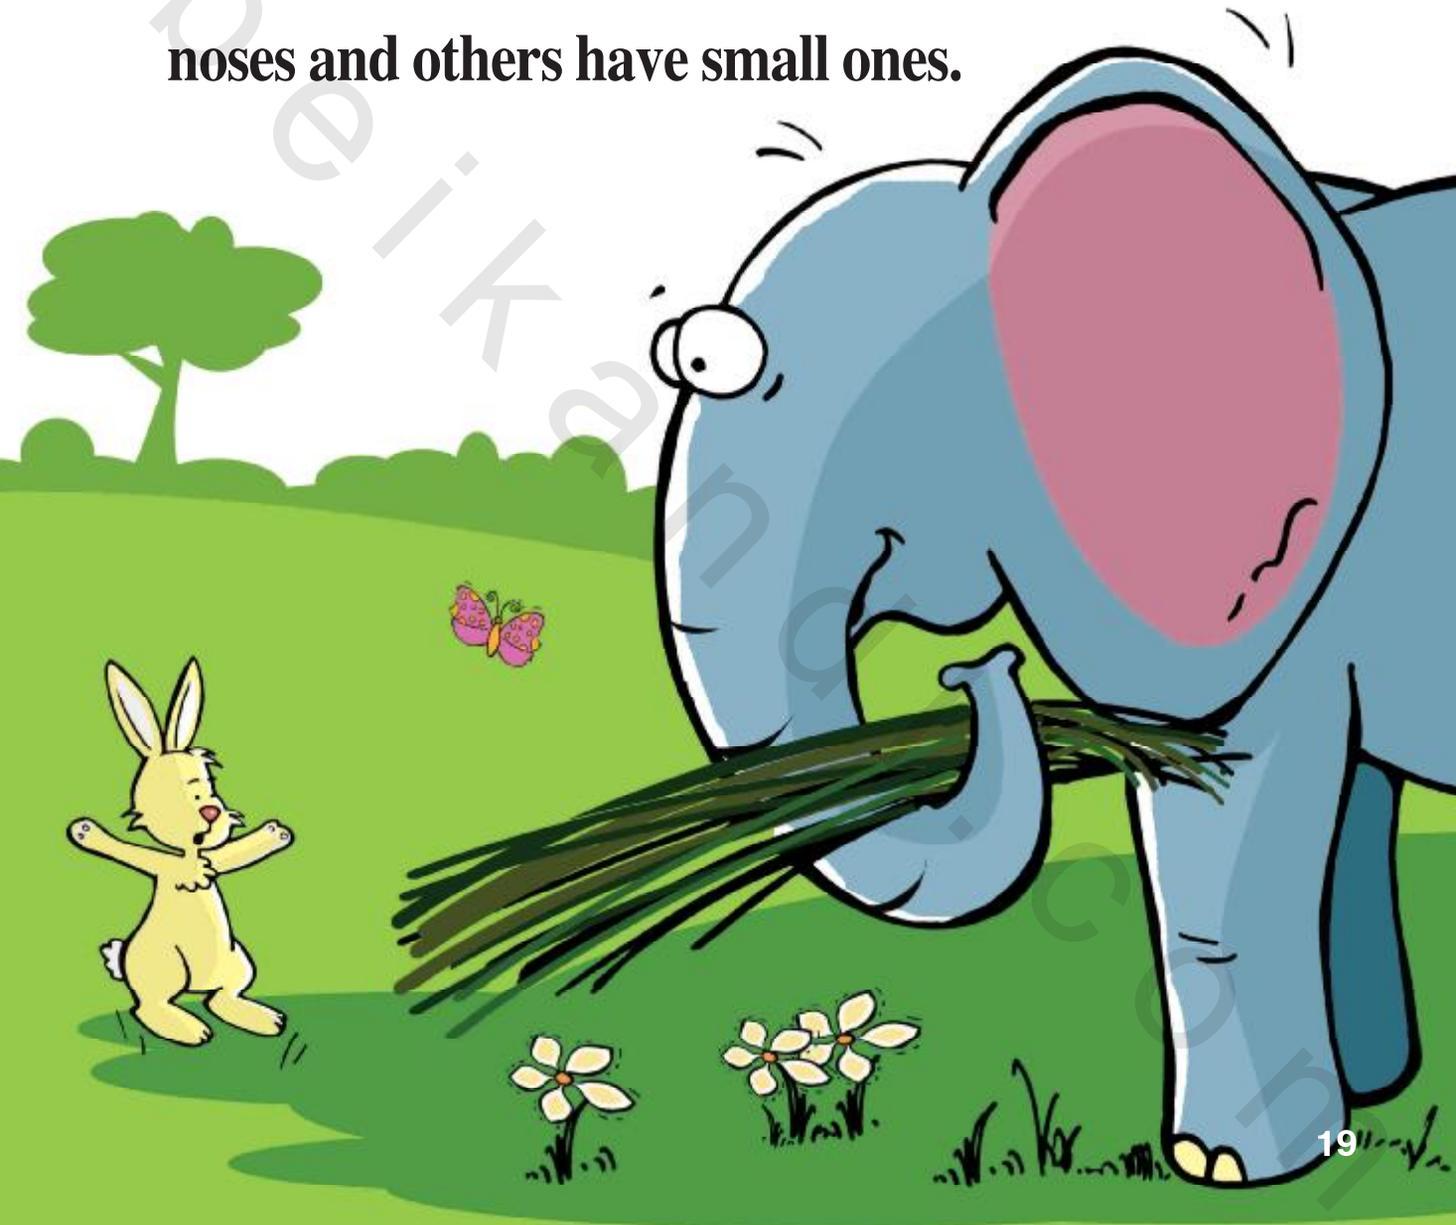

**We use the nose to smell
different scents.**

**I wish to have my mother's
food when I smell it.**

Some animals have very large noses and others have small ones.

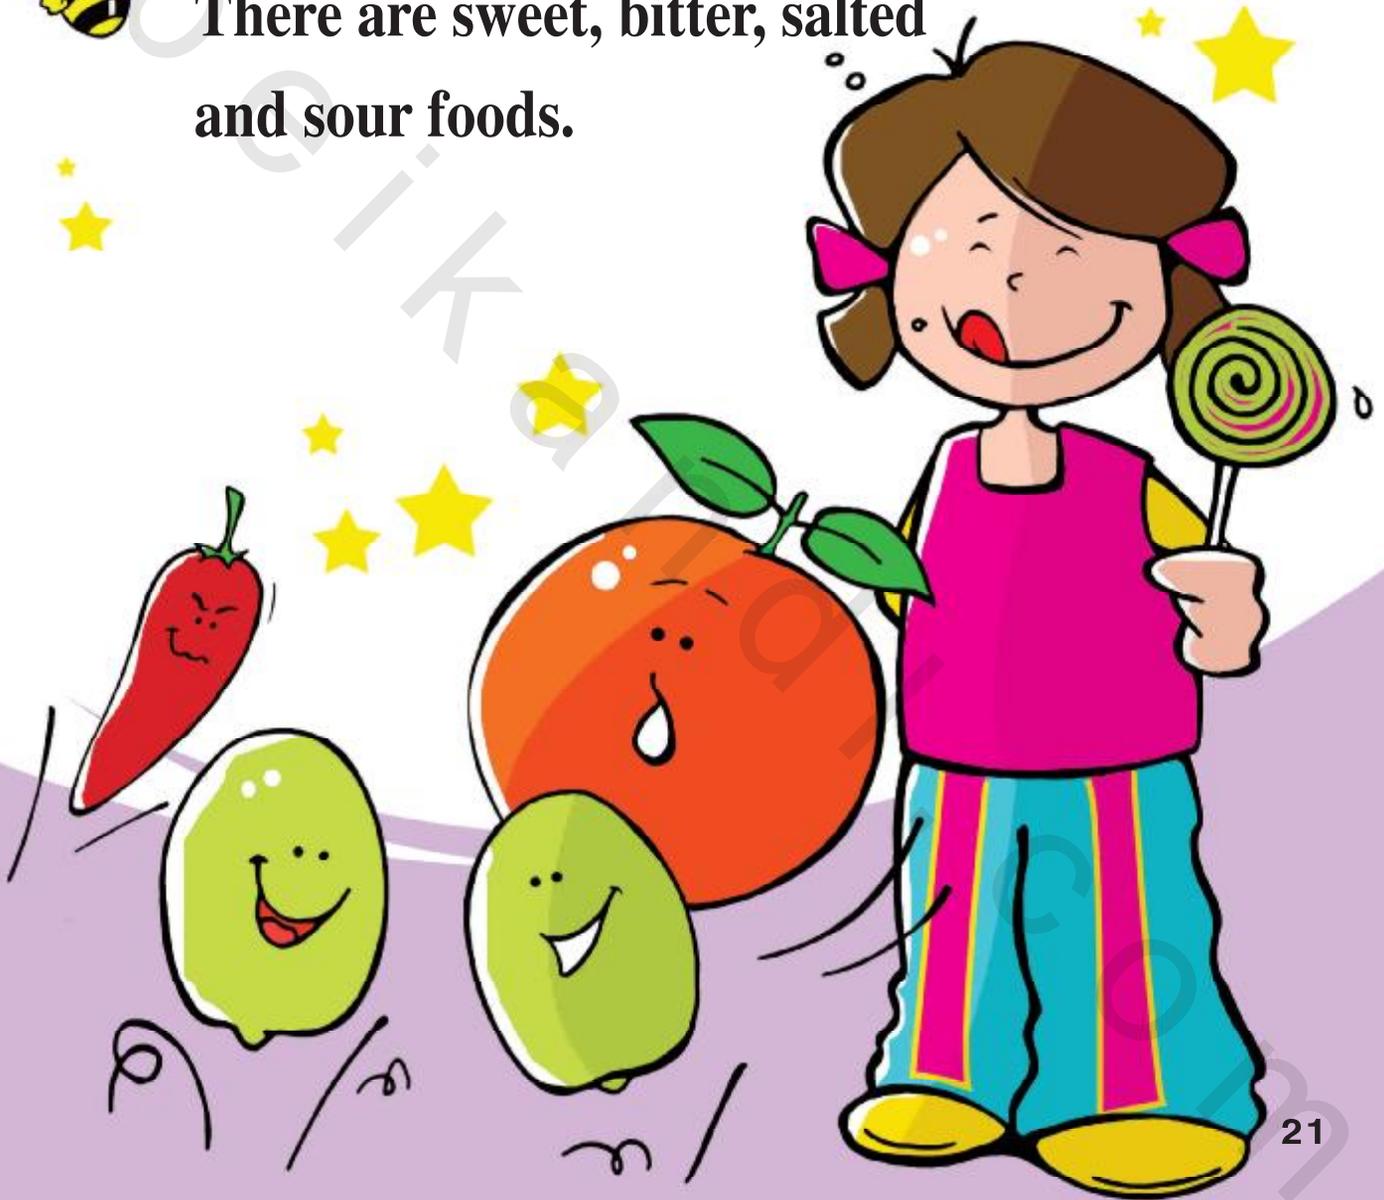

**Dogs are very clever at smelling things.
They can detect smells even after many
dayes.**

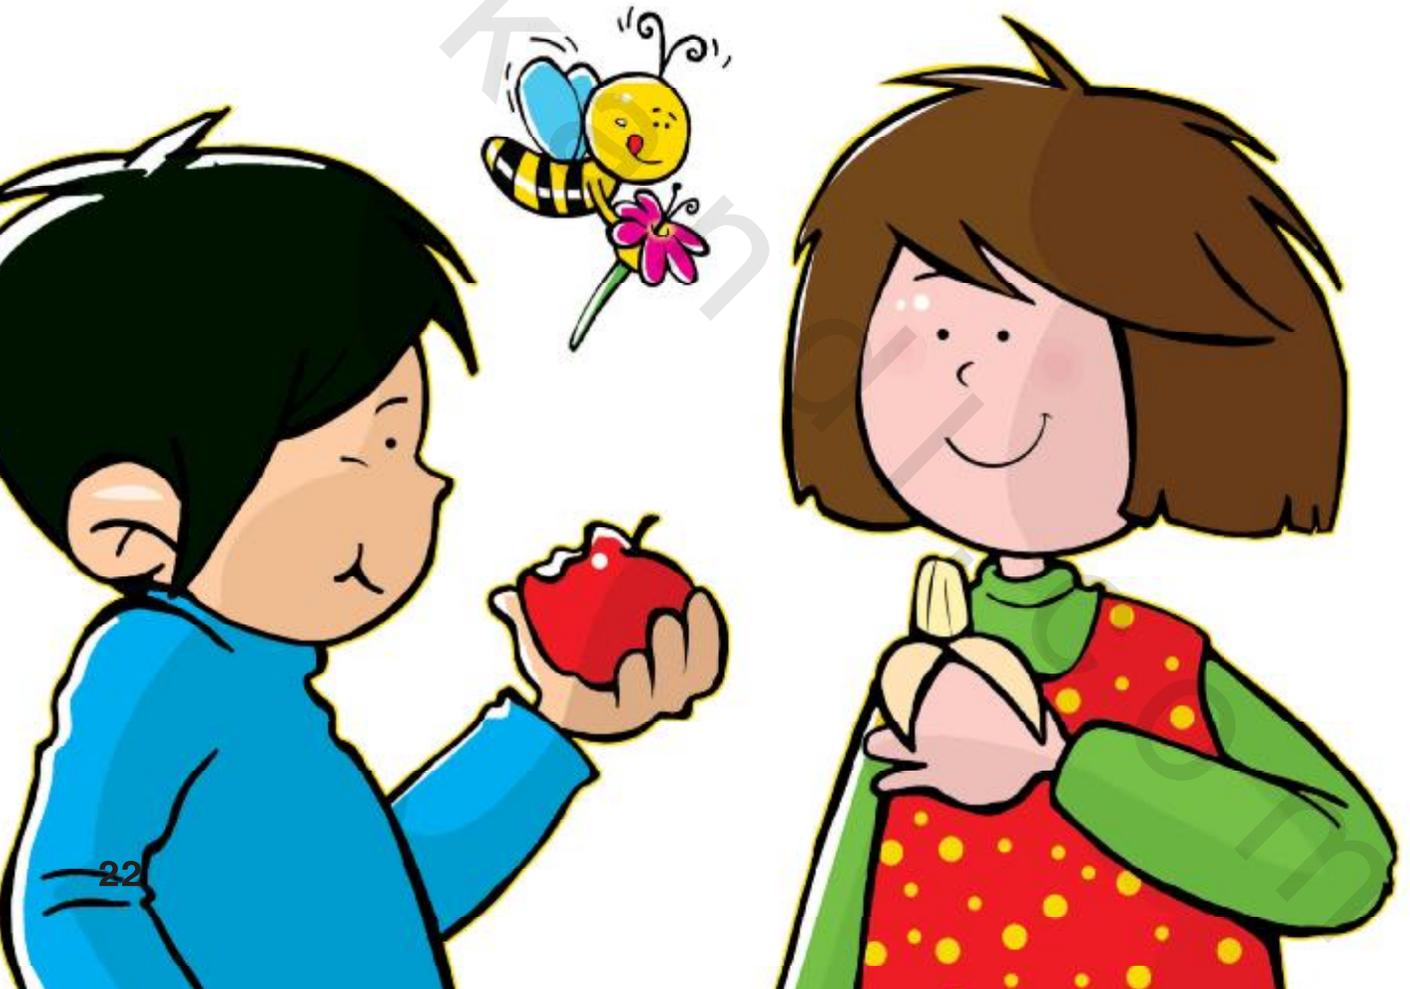

Foods have different flavors and tastes.

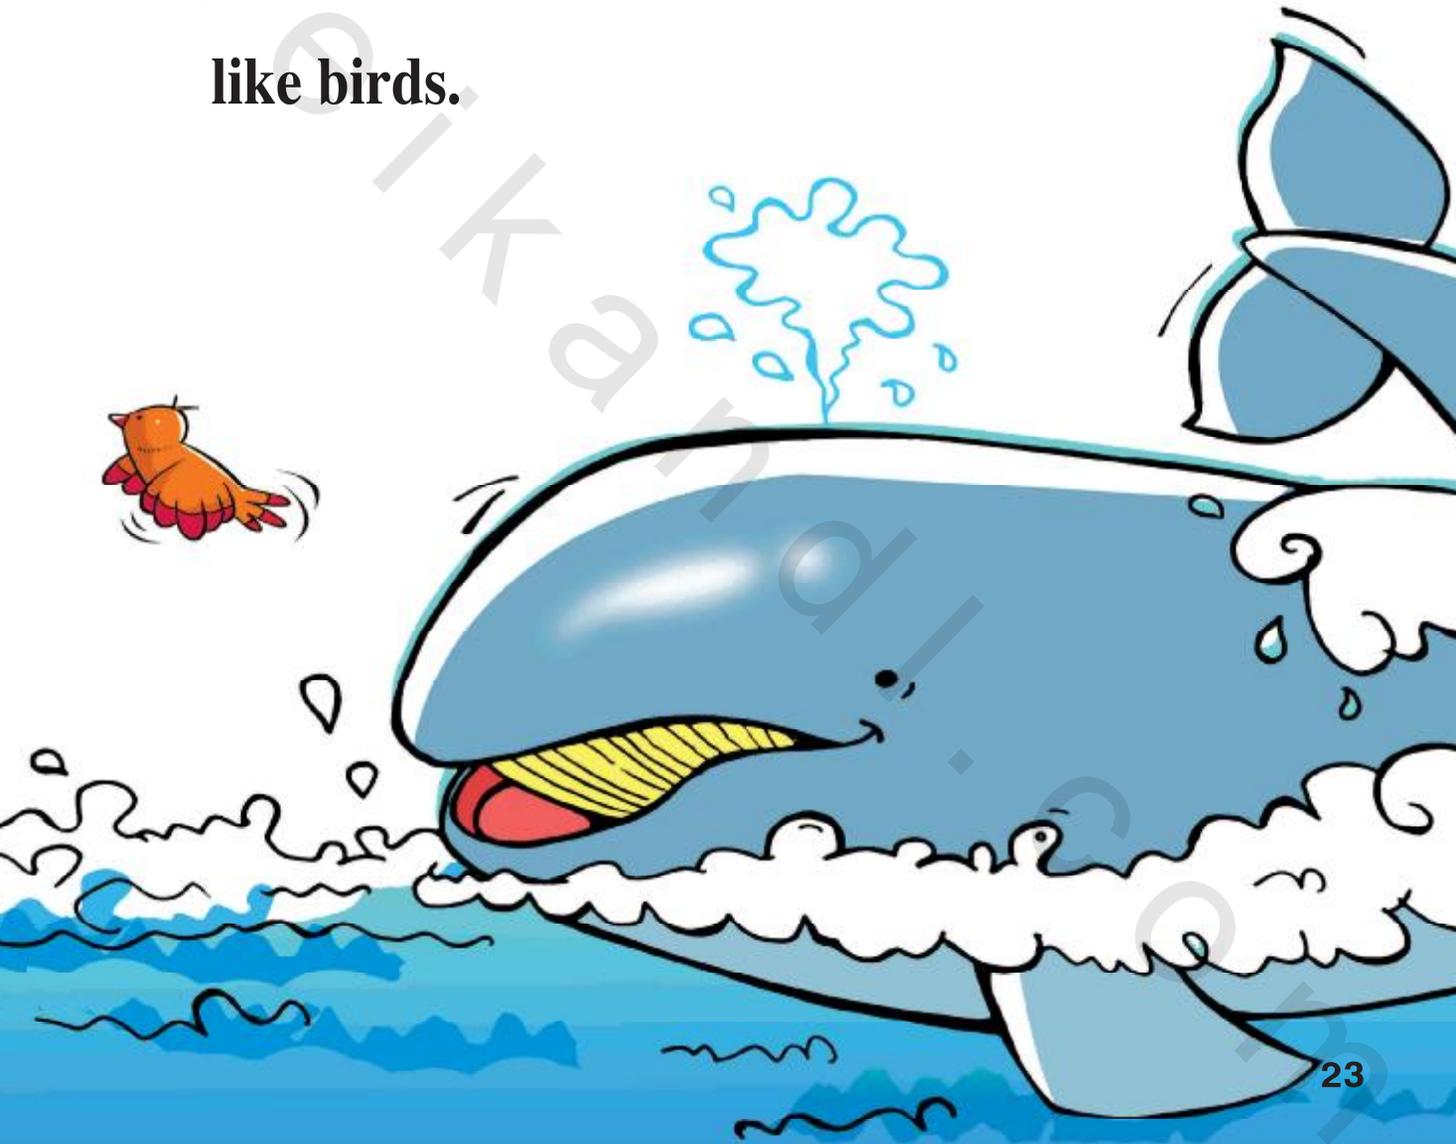

**There are sweet, bitter, salted
and sour foods.**

When we eat, we can tell the taste of food using our tongues.

Some animals have huge tongues like the whale and others have small ones like birds.

I need my tongue to speak, pronounce
letters and words and talk to my friends.
